

A new way to develop, afford, deploy and sustain your school's current use and future development of technology

LEARNING

What are your aspirations for technology supporting teaching and learning in the future at your school? This is our starting point in working with each school individually. There are things that are common to all schools but actually each school is unique and we work with your staff to derive that vision.

VISION

Having extensive educational networks we hope to add substantial pedagogically benefits that are already being derived in the use of technology for teaching and learning. We augment this with our insight of new technology coming through from manufacturers, and practice from academic research and educational projects.

STRATEGY

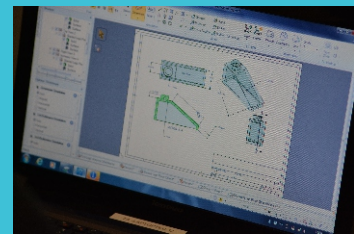

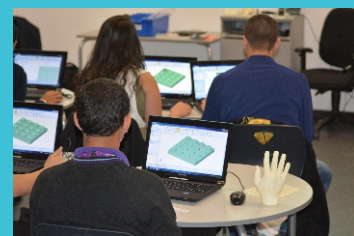

We work with your school to develop successful short, medium and long term strategy by which your technology deployment is as successful as possible. Planning training, installation and support in order that all activity is focussed on the efficient development of a rich teaching experience and an increase in student outcomes.

TECHNOLOGY

Once we have determined the desired vision and strategy then the selection of appropriate technology follows. Working with expert industry partners we help select the most appropriate technology to deliver the vision and strategy.

as a service

Technology can be expensive and the sustained fulfilment overwhelming. This is where our 'as a service' offering works with your schools budget to maximise on what technology can be purchased and guaranteed to be operational throughout its lifetime.
